

SEWING APPARATUS AND
INFORMING CONTROL PROGRAM THEREFOR
ABSTRACT OF THE DISCLOSURE

5 A sewing apparatus such as a sewing machine includes a cassette
mount to which a thread cassette having a thread accommodating section
for accommodating a thread supply is detachably attached, at least one
detector detecting an operating state of at least one mechanism related
with the thread cassette, a determining unit determining whether the
10 thread cassette can be attached to the cassette mount, based on a result of
detection by the detector, and an informing unit informing a result of
determination by the determining unit.
